

PRODUCT OVERVIEW

What is Managed Profile?

Managed Profile is a tool specifically targeted at simplifying the management of user profiles in both Citrix and desktop environments, while at the same time providing greater profile stability and control. It combines the stability of a mandatory profile with the flexibility of a roaming profile and enables administrators to have more control over user profiles deployed on the network. It also resolves issues relating to lost profile settings in Citrix environments and with its host of other features Managed Profile delivers a comprehensive user profile solution

What functionality does Managed Profile provide?

Managed Profile utilizes a rule-based methodology to manage user profile settings and includes the following functional elements

- Registry settings
- Files and folders
- Desktop, programs and quick launch shortcuts
- Drive mappings
- Printer settings
- Explorer namespace extension
- Logon and logoff processes
- Comprehensive logging and trace functionality

In addition, it provides a far more stable profile solution than that provided by either mandatory or roaming profiles without relinquishing the flexibility for users to modify their profile settings.

Key benefits

- Flexibility
- Stability
- Control

System requirements

- Windows 2000 or greater
- MS SQL 2000 or greater
